

Science Vision

At Brookside Primary School, science gives us the opportunity to ask questions, be curious and enquire about the changing world around us. Teachers promote learning that enables children to develop and link their growing knowledge of scientific concepts and experiences through visual, hands on and discussion led learning using key vocabulary and reflection. Science lessons include practical and group cooperation to develop scientific enquiry skills through reasoning and noticing changes or patterns to solve questions.

Principles

Our teachers help us if we are finding it a challenge

We like to do experiments

Children participate actively in the lessons

Science is learning about life

We like to solve answers to problems by learning then investigating

We like to invite visitors into the school to teach us in different ways

We like to figure out how to solve problems by asking questions

We like to explore new ideas and see discoveries

Our lessons link previous knowledge and skills
